Pune, India, 411036.

## PROFESSIONAL SUMMARY

**DevOps, Cloud, IT Operations, Linux & SRE Specialist** with 7+ years of experience managing enterprise-scale infrastructures and ensuring high availability of mission-critical systems. Expertise in **ITSM processes** (Incident, Change, and Problem Management), **Kubernetes orchestration**, and automation of operational workflows to improve reliability and scalability. Proven ability to lead major incident management, optimize system performance, and implement robust disaster recovery strategies. Experienced in applying **SRE principles**, driving operational excellence through monitoring, automation, and process improvements. Skilled in **multi-cloud** environments (AWS, Azure) and **DevOps practices** (Terraform, Ansible, CI/CD, AZO, GitHub Actions, Jenkins) for seamless infrastructure delivery.

## SKILLS

- **Cloud Infrastructure & DevOps** lifecycle management.
- **Virtualization & Containerization.**
- **IT Operations & Linux** Administration.
- **Incident, Change and Problem Management** (ITIL v4), Root Cause Analysis (RCA).
- **Site Reliability Engineering (SRE)**, Production Support & Operational Excellence.
- **Observability, monitoring, & alerting** implementation.
- **Storage and Backup** Administration.
- **Databases** - Administration, Troubleshooting, Clustering & Backups.
- **Networking** - Configuration, Troubleshooting.

## TOOLS AND TECHNOLOGIES

- |                                           |   |                                                                                    |
|-------------------------------------------|---|------------------------------------------------------------------------------------|
| • <b>Devops Tools</b>                     | : | Git, Jenkins, GitHub Actions, Azure DevOps, Gitlab, ArgoCD.                        |
| • <b>Public Cloud</b>                     | : | MS Azure, Amazon Web Service (AWS), Google Cloud Platform (GCP).                   |
| • <b>Operating Systems</b>                | : | Linux, Unix, Ubuntu, Red Hat, CentOS, Oracle, MacOS & Windows.                     |
| • <b>Virtualization Technologies</b>      | : | VMware, Hyper-V, KVM, Proxmox, vSphere, vCenter, libvirt.                          |
| • <b>Container Orchestration</b>          | : | Docker, Kubernetes, OpenShift, Cri-o.                                              |
| • <b>Database Systems</b>                 | : | MySQL, MariaDB, MongoDB, Redis.                                                    |
| • <b>ITSM</b>                             | : | Incident, Change, Problem Management (ITIL v4).                                    |
| • <b>Automation</b>                       | : | Bash Scripting, Ansible, Terraform, Helm Charts, SaltStack, Power Automate.        |
| • <b>Storage</b>                          | : | Commvault, Azure Storage Admin, ADLS, S3, Red Hat Ceph, SAN, LVM, NFS, SMB.        |
| • <b>Monitoring &amp;Alerting Systems</b> | : | Prometheus, Grafana, AppDynamics, Splunk, DataDog, SolarWinds, Azure Monitor, ELK. |
| • <b>Ticketing Tools</b>                  | : | Jira, ServiceNow, Zendesk.                                                         |
| • <b>Networking</b>                       | : | TCP/IP, NIC Bonding, Linux Bridges, VLAN, Routing & Subnetting, DNS, DHCP.         |
| • <b>Additional</b>                       | : | Istio, Service Mesh, Nginx, Apache, Apache Cloudstack, Active Directory.           |

## WORK EXPERIENCE

LTM | Specialist Architecture | Pune

Nov 2025 - Present

- Design, implement, and maintain CI/CD pipelines using **Azure DevOps, Jenkins, GitOps and GitHub Actions**, enabling automated build, test, and deployment workflows for cloud-native applications.
- Manage and operate **Kubernetes (K8s) clusters** on Azure Kubernetes Service (AKS), including application deployments, scaling, rolling updates, and troubleshooting, along with implementing Istio service mesh for traffic management, security, and observability.
- Automate infrastructure provisioning and application deployments using **Terraform**, including AKS cluster setup and **Istio service mesh configuration**, reducing manual effort and improving release reliability across DevOps and cloud environments.
- Collaborate with development, QA, and operations teams to implement **DevOps best practices**, including service mesh adoption, enabling faster feedback loops, improving deployment reliability, and ensuring secure and compliant CI/CD and Kubernetes-based cloud platforms.
- Monitor and optimize deployment pipelines and containerized workloads, including **Istio-enabled microservices**, ensuring faster release cycles, improved stability, and adherence to DevOps best practices.
- Implement **laC best practices**, including reusable **Terraform modules**, version control, & environment standardization across environments.
- Configured **Mutual TLS (mTLS)** across services to enforce secure, encrypted communication in the Azure Kubernetes Service (AKS) clusters.

- **Manage and troubleshoot Linux and Unix servers** across production and non-production environments, improving system **uptime by 30% and reducing incident resolution time by 40%**.
- Handle all CAB requests as a **key member of the CAB Approval Team**, reviewing and assessing change requests to minimize service disruptions and **enhance risk mitigation strategies**.
- Lead **major incident management** across hybrid cloud and on-premises infrastructure, reducing critical outage resolution time by 55%.
- **Design and deploy** containerized applications using **Docker, Kubernetes, and OpenShift**, enhancing deployment efficiency and reducing infrastructure provisioning time by 60%.
- Develop and maintain **CI/CD pipelines using Jenkins**, accelerating deployment cycles and **reducing manual intervention** in release management.
- Support **AWS and Azure cloud environments**, optimizing infrastructure for scalability, security, and cost efficiency, cutting cloud expenses by 20% through resource optimization.
- Monitor and maintain **Data Center operations**, proactively identifying and resolving infrastructure issues, reducing unplanned downtime.
- Manage and optimize **virtualization environments using vSphere, KVM and VMware**, improving resource utilization and **minimizing hardware costs**.
- Implemented robust **backup and disaster recovery strategies** on **AWS and Azure as well as On-premises Infrastructure**, ensuring 99.9% data availability and **reducing recovery time by 50% with Commvault**.
- **Collaborate closely with DevOps, Security, and Infrastructure** teams to ensure seamless service delivery and continuous improvement of incident management processes.
- Automated infrastructure provisioning with Terraform and Ansible, reducing deployment errors and time by 60%.
- Led and optimized **ITSM processes**, ensuring seamless execution of **Incident, Change, and Problem Management** to drive operational stability, minimize downtime, and enhance overall service reliability.
- Partner with SRE and DevOps teams to implement monitoring and alerting using **Prometheus and Grafana**, enabling proactive issue detection and resolution.
- Strengthened infrastructure security and compliance by implementing **IAM best practices, patch management, and vulnerability remediation** across cloud and on-premises environments, reducing security incidents by 35%.
- Managed block storage using **SAN/iSCSI**, including LUN discovery, multipathing, filesystem creation, LVM configuration, capacity management, and troubleshooting storage connectivity issues.
- Collaborate with stakeholders to understand infrastructure and application requirements, assess existing environments, and recommend scalable, secure, and reliable **cloud and DevOps solutions**.

- **Managed over 500+ Linux servers** (RHEL, CentOS, Ubuntu, Oracle) in production and non-production environments.
- Executed an on-premise VMware **VMs migration to Microsoft Azure cloud**, ensuring seamless transition and minimal downtime.
- **Automated** routine tasks using **Ansible and Bash scripts**, reducing manual effort by **40%**.
- **Configured and troubleshoot** services including Apache, Nginx, MySQL, Redis, PHP, Node.js, and MongoDB on Linux systems.
- **Led cross-functional investigations** into **application failures, infrastructure bottlenecks, and complex technical issues**, collaborating with Dev, QA, and Ops teams to improve system reliability.
- **Worked with cloud platforms (AWS, Azure)** for application deployment using cloud resources and monitored using cloud tools.
- Provided L2/L3 support across **Technical, Application, Cloud, Infrastructure, and Production** environments, diagnosing and resolving critical performance, security, and availability issues to ensure seamless operations and system resilience.
- Led end-to-end **Agile delivery** of PHP and Node.js products from initial discussion to final handover.
- Configured and supported Linux **high-availability clusters** using Pacemaker and Corosync, managing cluster resources, failover policies, quorum, fencing, and service recovery.
- Configured and troubleshoot **Linux networking**, including TCP/IP connectivity, routing, VLAN tagging, NIC bonding, Linux bridges, DNS, and network connectivity issues.
- Served as an **escalation point for critical issues**, drove swift resolutions, maintained documentation, implemented **open-source** solutions, and mentored junior engineers.
- Managed KVM-based virtual machines, including VM provisioning, start/stop/reboot operations, resource allocation, snapshots, and lifecycle management using **libvirt/virsh**.
- Proactively **patched and upgraded** Linux servers to enhance security and resolve critical **vulnerabilities**.
- Managed **large-scale infrastructure deployments**, ensuring **high availability, fault tolerance, and disaster recovery** strategies.
- Led **RCA investigations for high-severity incidents** and implemented preventive measures to avoid recurrence.

- Deployed **Kubernetes** and **Ceph storage** clusters from scratch, ensuring scalable, resilient, and production-ready infrastructure.
- Deployed and maintained **Linux infrastructure**, ensuring 99.9% uptime for business-critical applications.
- Managed end-to-end Data Centre operations, including asset management, system monitoring, and performance tuning for 99.9% uptime.
- Configured highly available **CephFS storage clusters** and utilized them in production for data redundancy and increased performance. Additionally, Implemented **LVM, SMB and NAS** solutions for storage management and optimized performance.
- Configured network services (**DNS, DHCP, FTP, NFS, Samba**) for enterprise applications and handled data backup and restores.
- Troubleshoot complex issues across **Linux, macOS, and Windows environments**, minimizing downtime and optimizing system performance.
- Designed and managed cloud infrastructure with **Apache CloudStack** and optimized **Ceph storage**, enabling efficient virtualization, multi-tenancy, and high-availability storage for cloud and on-premises environments.
- **Deployed and managed containerized workloads** using **Kubernetes and Docker**, streamlining application lifecycle management, scaling, and automation across cloud and hybrid infrastructures.
- Performed deep-dive troubleshooting across network and application layers, resolving latency and availability issues effectively.
